# lab2-image-retrieval

To run the program, assuming you already have all the relevant resources for this assignment.

1. you should run `server/image_vectorizer.py` to generate two files namely, `image_list.pickle` and `saved_features.txt`. Keep them inside lib folder where `search.py` script is available.

2. put the `main.html` in the `templates` folder and `background.png` int the `static` folder.

3. run the `rest-server.py`.

4. type `127.0.0.1:5000` in the browser you use then you can see the program.
